Extrutech Plastics has been awarded a Nine Million Dollar Contract by the U.S. Department of Energy through Fermi Lab.

Manitowoc, WI – June 29, 2010 – Extrutech Plastics, Inc., a custom plastic extruder has been awarded a three year contract, by Fermi Lab of Batavia, IL; to extrude and supply approximately 25,000 plastic panels. These panels will be incorporated into the construction of the new NOvA Neutrino Detector being built near Ash River, MN. The NOvA Project is funded through and operated by Fermi Lab and Argonne National Lab, both located near Chicago, IL.

The goal of the NOvA Project is to aid physicist in the study and behavior of neutrinos, the smallest of all known particles. These neutrinos will pass through the Extrutech plastic panels, which will be filled with a special mineral oil, and be detected by sensitive fiber optic wires that will send a signal to monitoring computers at the Fermi Lab facility for study. This particle research will continue until about 2022.

Upon this news, Mr. Sheehy said, “Extrutech Plastics is very excited to be part of such an important scientific research project. We look forward to working closely with Fermi and Argonne Labs towards a successful startup, in 2012, of this historic facility.”

Extrutech Plastics Inc. was founded in 1992 by Gregory R. Sheehy, in Manitowoc, WI. The purpose of Extrutech Plastics is to extrude high quality, close tolerance, custom profile extrusions. The company specializes in plastic wall and ceiling panels, suspended ceiling panels, plastic doors, clean rooms, interior plantation shutter components and many other building and construction products.

Extrutech Plastics services the following industries: Food Preparation, Milk and Cheese Plants, Agricultural Dairy, Hog and Poultry Facilities, Car and Truck Washes, Clean Rooms, Electrical Supply Co., Office Furniture Co. and the U.S. Government.

Extrutech Plastics is ISO 9001:2008 Certified and a registered U.S. Government supplier.
