EXTRUTECH PLASTICS, INC. Announces the Production of Plastic / Concrete Housing.

Manitowoc, WI, May 1, 2018 – Extrutech Plastics Inc. has begun the production of small and medium size houses for the use in the areas that are hit by hurricanes and severe storms every year. These houses are built using the patented Extrutech Form System. These forms are either 6” or 8” thick and 24” wide. They snap and lock together with an E-Spline Locking System. During assembly they are loaded with steel rebar and then filled with 4,000 # psi cement. Once the cement cures the walls are very strong and durable. These walls will not rot, rust, warp or corrode and will not blow over or float away. These walls are 100% water proof and termite proof. These houses provide a very safe and secure enclosure during severe weather. They are also very easy to maintain.

The Extrutech house is delivered as a pre-cut kit, and can be assembled on your cement slab in only a few days with basic tools. The kits include all the plastic wall forms, vinyl doors, vinyl windows, vinyl trims and vinyl ceiling panels to finish off the interior of the house. These houses can be produced in three colors, white, beige and gray.

Extrutech can also manufacture these houses to your design. Please send your plans or specifications and we can provide a detailed price quotation. The customer would supply the cement, rebar,

electrical, plumbing, HVAC, building permits and labor to assemble the house on their jobsite.

For 26 years, since 1992, Extrutech Plastics has specialized in the manufacture of high quality, water proof building components in Manitowoc, Wisconsin. Extrutech is a certified ISO 9001-2015 QMS manufacturer and a U.S. Government supplier. All products are made in the USA, by Americans, with only USA made materials. We offer a 15 year warranty.
